

EMERGENCY RESPONSE PLAN EXERCISE

10th September 2013

In a follow up to Horizon's implementation of a safety management system (SMS), the academy held a mock exercise of an aircraft accident. In the drill a helicopter was supposed to have crashed on site and civil defense and emergency medical services from the Al Ain International Airport were also present for the exercise.

The objective of an SMS is to provide a structured management system to control risk in operations. It also provides the organizational framework to support a sound safety culture. The aim of the drill was to educate the academy staff and students on the emergency response plans in the event of such an occurrence.
